

Occupational Therapy

What is an Occupational Therapist?

An Occupational Therapist is a university-trained health professional. Their role is to maximise a client's independence, safety and quality of life by minimising the impact of the client's impairments. This is done by assessing and addressing the barriers raised by disease, injury or development and ageing. OTs often use education and rehabilitation to develop a person's performance in everyday activities. This is what we refer to as 'occupation'.

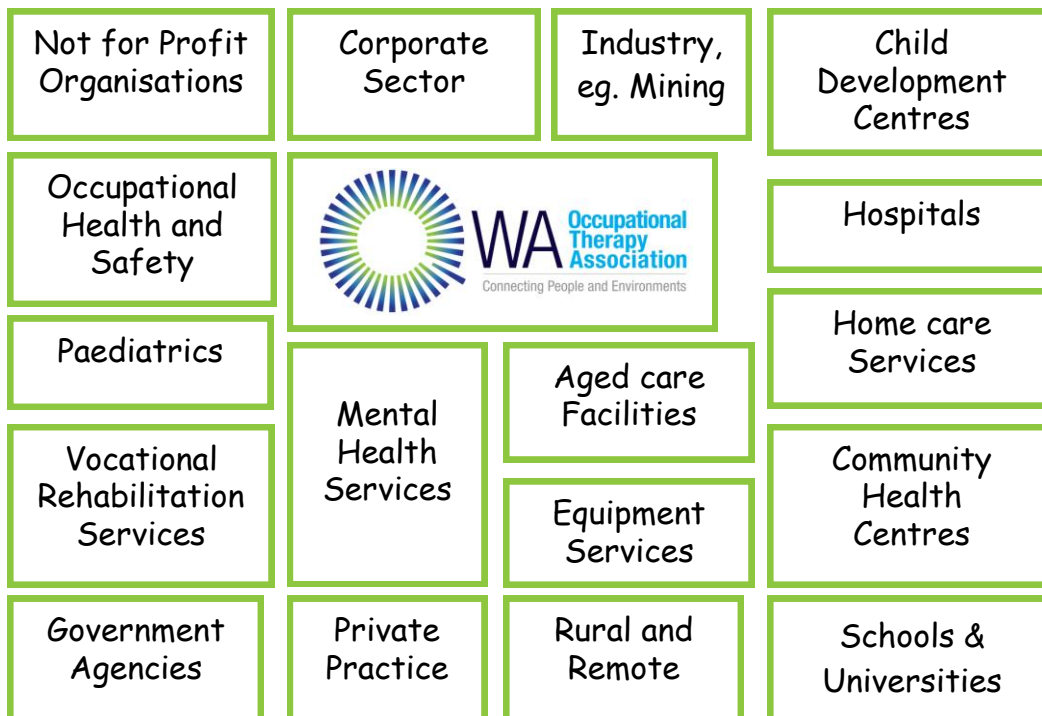

How to become an Occupational Therapist in WA?

- Complete a 4 year full time Bachelor of Science (Occupational Therapy) **OR**
